Introduction

Today's ever-changing business environment requires new approaches to Project Management, which has become an important tool for dealing with time-to-market, resources, limitations, downsizing and global competition. As markets and project organizations become more dynamic, administrative and technical skills alone are no-longer sufficient to deal with the complexities of modern project undertakings. In recent years, the Project Management Professional Certifications "PMP, PMI-RMP, SP, etc" from the Project Management Institute "PMI" have become the most sought after certification in the world of project management professionals for those who are practicing project management in their work. As per the Project Management Institute "PMI Global Standards", the knowledge & skills needed for the project management professionals are derived from 9 Areas of Knowledge which are: Integration, Scope, Time, Cost, Quality, Human Resource, Communications, Risk and Procurements Management. This program will go through these areas of knowledge in some degree of details and will offer a good opportunity for the participants to share their experience and enhance their knowledge and skills in project management. The program will also offer a good opportunity for those who are interested to go for the PMP, PMI-RMP, and SP exams where they will be fully acquainted about the process, tricks, tips that will help them to pass them. The candidates will also be oriented in using the MS Project as an effective tool in planning the project schedule.
